AWS EC2 Practical Lab Documentation

Task 1 – Vertical Scaling

Objective: Scale an EC2 instance from t3.micro to t3.small.

Steps:

1. Opened EC2 Console and selected the t3.micro instance.

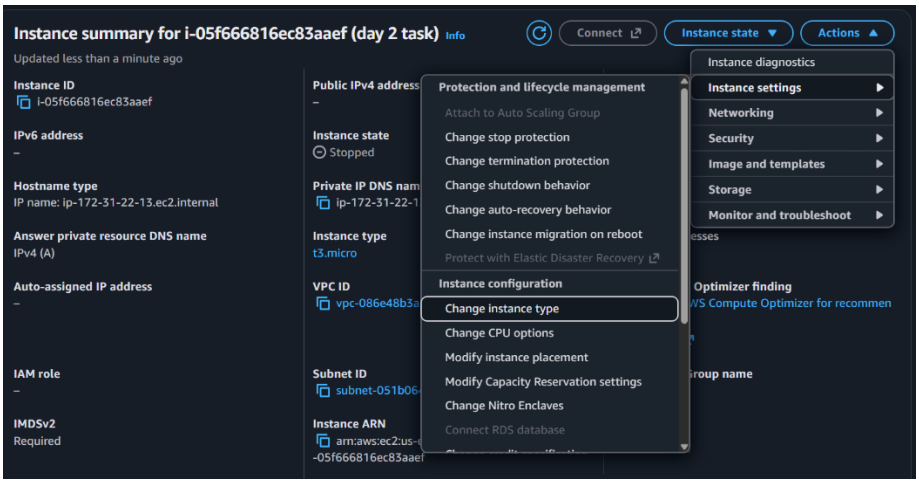

2. Stopped the instance.

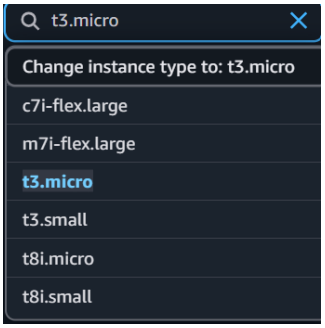

3. Changed instance type to t3.small.

   Actions → Instance settings → Change instance type

   see the current type

   Select t3.small than click

4. Started the instance.

5. Verified the instance was **Running** with type t3.small.

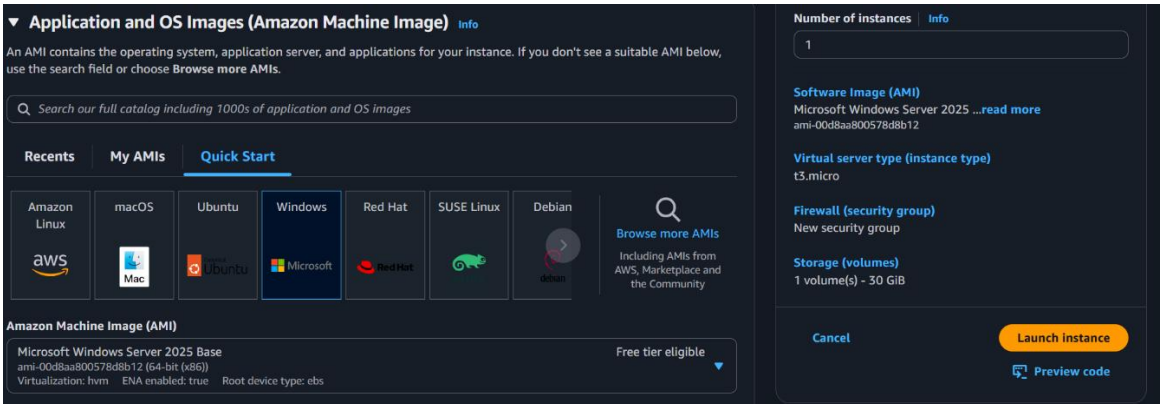

Result: Successfully completed vertical scaling.

Task 2 – Windows EC2 with RDP

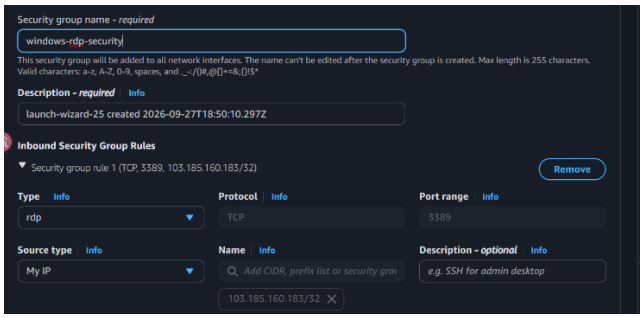

Objective: Launch a Windows EC2 instance and connect using RDP.

Steps:

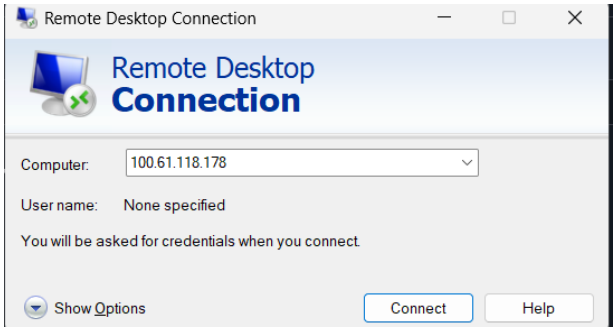

1. Launched a Windows Server EC2 instance.

2. Configured Security Group for **RDP TCP 3389**.

3. Started the instance and obtained its Public IPv4 address.
4. Retrieved the Windows Administrator password using the EC2 key pair.
5. Connected using **Remote Desktop Connection (RDP)**.

6. Verified the Windows desktop.

Result: Successfully connected to the Windows EC2 instance using RDP.

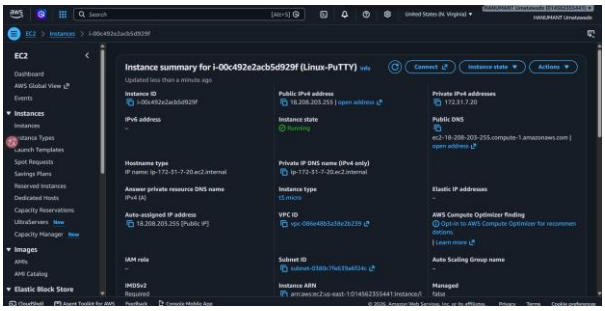

Task 3 – Linux EC2 with PuTTY

Objective: Connect to a Linux EC2 instance using PuTTY.

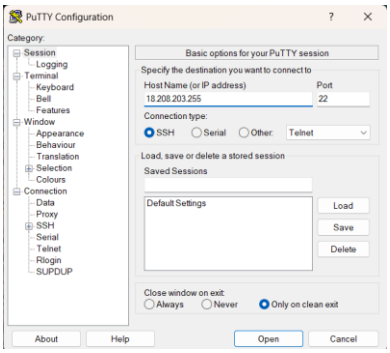

Steps:

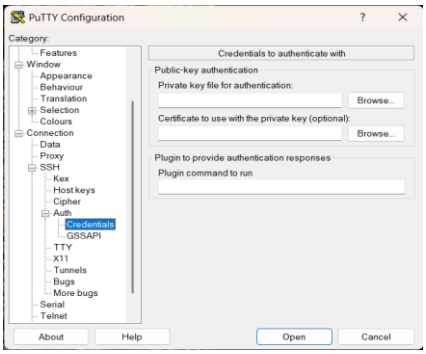

1. Launched an Amazon Linux EC2 instance.

AWS EC2 – DAY 2 TASKS

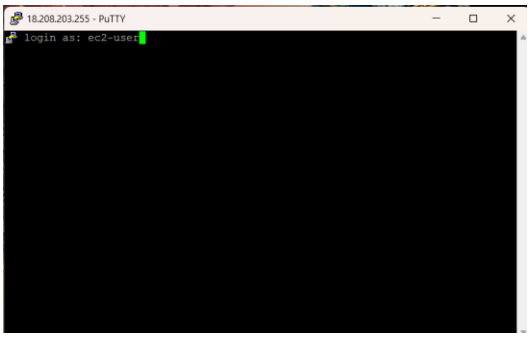

2. Created and downloaded a .pem key.
3. Allowed **SSH TCP 22** in the Security Group.
4. Converted .pem to .ppk using PuTTYgen.
5. Configured PuTTY with the EC2 Public IPv4 address and .ppk key.

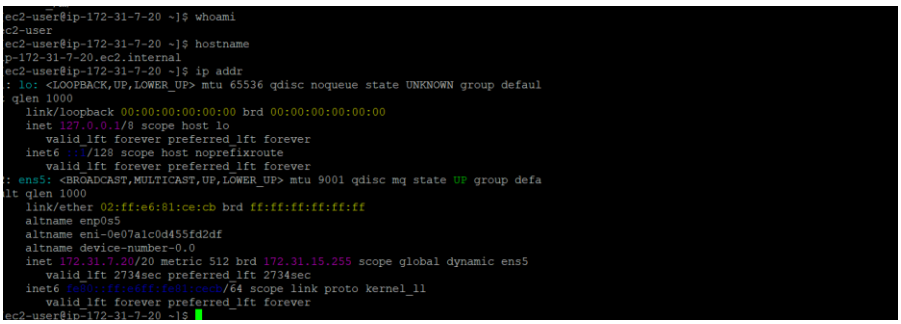

6. Connected using username ec2-user.

7. Verified the connection using whoami.

Result: Successfully connected to the Linux EC2 instance using PuTTY.

Successfully completed all three AWS EC2 practical tasks.
